Acknowledgments

The 2008 MIMS Annual Report is a result of the ongoing efforts of a dedicated team of individuals throughout the province of Manitoba including public health nurses, immunization coordinators, physicians and other primary health care providers. Their combined efforts and expertise in the area of immunization provide the data that is necessary to produce this valuable report. We also gratefully acknowledge the work of the MIMS data entry staff throughout the province.

In addition, thanks are extended to the Health Information Management (HIM) and the Information Systems Branch staff at Manitoba Health for their contribution to the production of the 2008 MIMS Report.

1. Overview

Immunization is one of the most effective and cost-efficient health interventions of modern times. In the last 50 years, immunization has probably saved more lives in Canada than any other health intervention (*Canadian Immunization Guide*, 7th Edition, 2006). Immunization registries play a key role in ensuring that individuals receive all recommended immunizations and avoid those that are unnecessary. These registries also permit efficient evaluation of the immunization status of specific individuals, groups or the population overall.

Manitoba's immunization registry, the Manitoba Immunization Monitoring System (MIMS), became functional province-wide in 1988, making it the first such registry in Canada. The aim of the MIMS annual report is to provide an overall picture of childhood, influenza and pneumococcal immunization that can be used to inform priority setting, policy development, program planning and evaluation. The *2008 MIMS Annual Report* is the seventh such report produced using a standardized methodology to allow year-to-year review of progress against provincial and national immunization rates.

MIMS is managed by the Public Health Planning Branch, Public Health and Primary Health Care, Manitoba Health (MH). Initially, MIMS only recorded immunizations provided to children (born after 1980). In 2000, adult immunizations were added to the registry. Immunization events are captured in MIMS in two ways: publicly-funded immunizations administered by physicians are entered into the system via the physician billing system; all other immunizations, such as those provided by public health nurses, are recorded by data entry staff in the regions. The goal is to have all immunizations administered in Manitoba recorded in MIMS.

MIMS captures information related to an immunization event, including type of vaccine administered, date of administration and service provider. This data is the basis of a variety of immunization reports, including this annual report. MIMS also provides a centralized "reminder" function, automatically generating letters on a monthly basis to parents of children aged 15 months, 20 months and 5 ½ years who may be missing recommended immunizations (as per Manitoba's Routine Immunization Schedule for Infants and Children, Appendix 1) and encouraging them to ensure their children's immunizations are up-to-date. Over 155 sites have MIMS access throughout the province. Usually associated with public health offices, these sites provide information on the immunization status of clients to health care providers and allow data input following the delivery of an immunization.

Your comments and suggestions to make future reports more informative are most welcome. To provide feedback please contact:

2. Glossary

ABBREVIATIONS

FNIH	First Nations and Inuit Health
MH	Manitoba Health
MIMS	Manitoba Immunization Monitoring System
Pop	Population
RHA	Regional Health Authority

IMMUNOGENS

Diphth	Diphtheria
HB	Hepatitis B
Hib	Haemophilus influenzae type b
Flu	Seasonal influenza
MC	Meningococcal Conjugate C
PCV7	Pneumococcal Conjugate 7 valent
Pert	Pertussis
Tet	Tetanus
V	Varicella

VACCINES

DTaP-IPV	Diphtheria, acellular Pertussis, Tetanus, Polio
DTaP-IPV-Hib	Diphtheria, acellular Pertussis, Tetanus, Polio, Haemophilus influenza type b
HBV	Hepatitis B Vaccine
HEPA/B	Hepatitis A and B
Flu	Seasonal Influenza
MC	Meningococcal Conjugate
MMR	Measles, Mumps, Rubella
PCV7	Pneumococcal Conjugate 7 valent
PPV23	Pneumococcal Polysaccharide 23 valent
Td	Tetanus, diphtheria
Tdap	Tetanus, diphtheria, acellular pertussis
V	Varicella

3. Description of Criteria for MIMS Annual Report

The annual report includes eight separate reports that fall into two main groupings: Childhood Immunization Reports and Influenza and Pneumococcal Immunization Reports. These reports provide information on immunization coverage by age or by region of residence (coverage reports), and a description of who provided vaccine doses by region of practice (vaccine doses reports).

A consistent format is followed for each report. Data is provided for Manitoba overall and then for each of the 11 regional health authorities (Appendix 2). The data is grouped by First Nations status, Non-First Nations status, and a total overall. Cell-sizes less than or equal to 5 have been suppressed to minimize the potential for identification of individuals.

First Nations Status is based on voluntary self-declaration at the time of registration with Manitoba Health. First Nations and Inuit Health (FNIH) estimate that this represents approximately 65 per cent of the status First Nation population. First Nations and Inuit Health is responsible for providing immunizations to First Nations clients living on reserve (approximately 60 per cent of the status First Nation population). Audits indicate that gaps exist between immunizations administered to FNIH clients as documented on paper records versus those data entered into MIMS. Actual coverage rates for FNIH clients are, therefore, likely higher than those generated using MIMS data.

3.1 Coverage Reports

3.11 Childhood Immunization Coverage Reports

The data represented in these reports represents the percentage rates of children who are completely immunized from birth with a specific number of doses for a particular immunogen (see definition below) or all the recommended immunogens for a particular age. The accepted terminology to describe this is “Complete for age from birth.” Coverage reports do not include children who were not immunized as per the routine recommended immunization schedule from birth.

Complete for age from birth: For the purposes of this report, a child is required to have received the recommended doses of an immunogen from birth, as per the schedule given below. For example, to determine coverage at age two for diphtheria, the denominator would be all children who turned two years of age in 2008 and the numerator would be those children from the denominator group who had received four doses of the diphtheria immunogen by their second birthday. If even one dose is missed, a child would not be considered “complete for age from birth” and would not be included in the coverage rate.

Table 1: Total Doses Required to be “Complete for Age from Birth”

Immunogen	Age in Years				
	1	2	7	11	17
Diphtheria	3	4	5	5	6
Tetanus	3	4	5	5	6
Pertussis	3	4	5	5	6
Polio	2	3	4	4	4
Hib	3	4	4	0	0
PCV7	3	4	0	0	0
Measles	0	1	2	2	2
Mumps	0	1	1	1	1
Rubella	0	1	1	1	1
Varicella	0	1	0	0	0
Hepatitis B	0	0	0	3	3
Men-C-C	0	0	0	1	0

Doses required: The number of doses of immunogens required to be complete for age from birth is as per Manitoba's Routine Immunization Schedule for Infants and Children (Appendix 1).

Coverage by Immunogen: The coverage reports are listed by immunogen rather than by vaccine, as vaccines may include more than one immunogen and the immunogen composition of vaccines can change over time. The term immunogen, rather than antigen, is used in this report to be consistent with the *Canadian Immunization Guide*, 7th Edition. All doses of each immunogen were included in the coverage report irrespective of the vaccine given. For example, hepatitis B reflects all doses of immunogen administered to individuals including those from hepatitis A/B combination vaccine (Twinrix) and hepatitis B vaccine.

Immunogen: a substance capable of inducing a specific immune response

Age in years reflects a client's age on date of birth within the calendar year 2008; for example, if a child turned three years of age on May 1, 2008 the child is considered to be three years old for the purpose of this report.

Continuous residents in Manitoba is determined based on an individual being continuously registered with Manitoba Health for insured benefits from birth until December 31, 2008.

Non-continuous residents would include clients who, for example, may have been born in Manitoba, moved out for a period of time and then returned; or clients who were not born in Manitoba and moved to the province.

All residents include continuous and non-continuous residents, as defined above.

Childhood Immunization coverage rates (Report 1, 2, 3 and 4) were calculated as follows:

$$\text{Rate}/100 = \frac{\text{Number of individuals in age group "X" from the MIMS dataset}}{\text{Number of individuals in age group "X" in the population dataset}} \times 100$$

The numerator was determined as follows:

- The MIMS data used was an April 2009 "snapshot" (to permit immunizations occurring at the end of 2008 to be entered) of individuals complete for age from birth, from the MIMS database that was provided by MH's Information Systems Branch. Multiple years of data are required to determine whether children are complete for age from birth. Immunizations where the service date is unknown were excluded. The data were summarized by individual and included: age, First Nations status and a count of immunogen doses.
- The MIMS data was linked to the MH Registry to determine client **region of residence**. Each individual was assigned to only one region of residence (Appendix 2) during the reporting period (2008), irrespective of whether or not they lived in multiple health regions since birth. The region used was the health authority in which the individual was resident as of April following the report year (i.e., April 2009) to coincide with the MIMS April snapshot of doses administered as of December 31, 2008.

Region of residence: the regional health authority within which the individual resides

The denominator was determined as follows:

- The number of people within a specific health region was determined as of June 1 during the report year (June 1, 2008). This population data comes from the MH Population Report and is based on records of residents registered with MH as of that date.

Notes:

- Immunogens included in one vaccine may require a different number of doses to be considered complete for age from birth. This may result in different coverage rates for each immunogen included in the same vaccine. For example, the measles, mumps and rubella vaccine (recommended at 12 months and again at four to six years of age) requires two doses of measles, but only one dose of mumps and rubella for a child to be considered “complete for age from birth.”
- Hib doses are required at ages one, two and seven years. Hib is included in the immunogen coverage reports for children at age 11 and 17 years for information only as there is no provincial recommendation for Hib vaccine after children reach age 60 months. Hib is not included in “complete for age from birth” requirements for children beyond the age of seven.
- There was a substantial increase in Hib coverage rate in 2008 for 17 year olds as this cohort reached this age since the introduction of Hib in 1992.
- One dose of varicella vaccine at the age of two years is required for a child to be “Complete for Age from Birth for all Immunogens” (Reports 3 and 4). However, it may not be clinically recommended for a child to receive varicella immunization by this age if he/she has a previous history of varicella illness. This may result in slightly lower rates for “Complete for Age from Birth for all Immunogens.”

As a result of the differences in when individuals in the numerator and denominator are assigned to a regional health authority, coverage rates may be greater than 100 per cent if the number of individuals vaccinated against a particular disease is greater than the number of individuals assigned to that regional health authority.

3.12 Influenza and Pneumococcal Coverage Report

Influenza and pneumococcal immunization coverage rates (Report 6) were calculated as follows:

$$\text{Rate}/100 = \frac{\text{Number of immunized individuals in age group “X” from the MIMS dataset}}{\text{Number of individuals in age group “X” in the population dataset}} \times 100$$

The numerator was determined as follows:

- The MIMS data used was an April 2009 “snapshot” (to permit immunizations occurring at the end of 2008 to be entered) of individuals who have received influenza or pneumococcal immunizations, as per the MIMS database. The data were summarized by individual and include age, First Nations status and a count of individuals receiving a dose of influenza or pneumococcal vaccine.
- The age of the individual was determined as of his/her birthday within the calendar year. Age data were converted to age groups: birth to two years, three to 17 years, 18 to 64 years, <65 high risk, <65 all and 65+ years. The “<65 high risk” population estimate was based on a calculation of 11 per cent of the total under-65 population. The same estimate was used for both influenza and pneumococcal high-risk groups, although the target population for immunization is not identical. The “<65 high risk” numerator data are those doses identified via public health data entry in MIMS, as doses recorded via physician billing do not capture this information. These same doses are also included in the “<65 all” category and coverage calculations.
- For influenza, only immunizations administered during 2008 are used in this report.
- For pneumococcal immunizations, the data are analyzed twice: the first report includes only those doses administered during 2008; the second, all individuals who have ever received a pneumococcal immunization (presented as a cumulative coverage rate). The cumulative data is important as the eligible population is recommended to have one dose.

- The MIMS data was linked to the MH Registry to determine client **region of residence**. Each individual was assigned to only one region of residence (Appendix 2) during the reporting period (2008), regardless of whether or not they lived in more than one region during that time. The region used was that in which the individual was resident as of April following the report year (April 2009) to coincide with the MIMS April snapshot of doses administered as of December 31, 2008.

The denominator was determined as follows:

- The number of people within a specific health region is determined as of June 1 during the report year (June 1, 2008). This population data comes from the MH Population Report and is based on records of residents registered with MH as of that date.

3.2 Vaccine Doses Report

These reports reflect doses administered by providers from January 1 to December 31, 2008, based on the region in which they practice (Appendix 2). The same data cannot be used to calculate immunization coverage rates as providers do not have a particular population denominator to which they are assigned.

Provider location: the region (RHA) in which a provider's practice is located

These data reflect doses administered by four different provider types:

- Public health nurse (off reserve)
- Physician
- First Nation/Tribal Council (all providers on reserve, including public health nurses)
- Other (all other providers, including facilities, primary care providers, pharmacies and other unknown providers)

3.21 Childhood Vaccine Doses Report

Vaccine doses are reported by provider type for all vaccines recommended in Manitoba's Routine Immunization Schedule for Infants and Children (Appendix 1). Td doses are also reported to capture individuals \geq seven years of age who received tetanus and diphtheria alone.

3.22 Influenza Vaccine Doses Report

Influenza doses are reported by provider type and reason for immunization. Reason for immunization is based on the MH eligibility criteria for influenza vaccine. These criteria include: health care worker, high risk, household contact, no risk identified (client paid) and outbreak immunization. Immunizations captured via the physician billing system do not include the reason for immunization and therefore these vaccine doses are reported as "no reason given."

3.23 Pneumococcal Vaccine Doses Report

Pneumococcal doses are reported by provider type and reason for immunization. Reason for immunization is based on the MH eligibility criteria for pneumococcal (PPV23) vaccine. These criteria include: high risk, no risk identified (client paid) and outbreak immunization. Immunizations captured via the physician billing system do not include the reason for immunization and therefore these vaccine doses are reported as "no reason given."

4. Childhood Immunization Reports

Report 1 - Complete for Age from Birth to 2008 by Immunogen and Region of Residence

NOTE:

This report includes both continuous and non-continuous Manitoba residents.

5. Influenza and Pneumococcal Reports

Report 6 - Influenza and Pneumococcal (PPV23) Coverage Report, by Client Age and Region of Residence 2008

Note: For pneumococcal immunizations, the data are analyzed twice: the first dataset includes only those doses administered during 2008; the second dataset includes all recorded pneumococcal doses ever recorded in MIMS and is presented as a cumulative coverage rate. The cumulative data is important as the eligible population is recommended to have one dose.

January 1 to December 31, 2008

Appendix 1

Manitoba's Routine Immunization Schedule for Infants and Children

Age	DaPTP*	Hib	MMR**	HBV	Tdap	PCV7	PPV23	MC	MP	V	Flu****
2 months	X	X				X					
4 months	X	X				X					
6 months	X	X				X					X***
12 months			X							X	
18 months	X	X				X					
4 to 6 years	X		X							X	
10 years				XXX				X		X	
14 to 16 years					X						

DaPTP* Diphtheria, acellular Pertussis, Tetanus, Polio (given as “one needle” with Hib)

Hib Haemophilus Influenzae B

MMR** Measles, Mumps, Rubella (given as “one needle” on or after the first birthday)

HBV Hepatitis B (3-dose series)

Tdap Tetanus, diphtheria, acellular pertussis (given as “one needle”)

PCV7 Pneumococcal conjugate 7 valent

PPV23 Pneumococcal polysaccharide 23 valent

MC Meningococcal conjugate

MP Meningococcal polysaccharide A,C,Y,W-135

V Varicella

Flu Influenza

*** More than one dose may be required depending on age.

**** Given to healthy children (six to 23 months of age) starting fall 2004.
